

RefriCool

CIRSA 

SolX Continues Cirsa Casino Rollout!

Gino and the Panama team are in the final stages of another ThermX Installation. This time, at Cirsa's Bingo 90 Casino, in Panama City. The entire HVAC system was upgraded to include ThermX on a new 85 ton Trane VRF system, and was the first project delivered by Refricool Panama. Refricool is a large, influential distributor/contractor operating 10 distribution locations across Panama. They represent Trane as well as many other major air conditioning brands. This installation is being utilized to train all Refricool personnel on the installation and commissioning of ThermX.

As part of the agreement, the casino's HVAC systems were never allowed to be taken offline. This was no problem for Gino and the Refricool team, as they were up to the task. To accommodate this, the team constructed an additional secondary HVAC system simultaneously within the building, as to not take the primary system down. Lots of hard work, but a really cool install.

Great news from Guam

Lynn & his team at Green Energy Solutions Inc had an article published in ASHRAE's journal earlier last month, detailing their combined energy savings for Guam's Department of Education. Please see the link below. This is a great article in a world-renowned publication. Well done Lynn.

Lynn is also working very closely with Siemens, the international ESCO group. They recently conducted some testing on ThermX systems down in Guam. The results of which for now will remain unpublished, but what we can tell you is that they were exceptionally positive.

Saving a fortune!

Following the successful evaluation of ThermX integration at one of their sites in Florida, a well-known nationwide auto parts retailer has agreed to extend the evaluation to a further 5 sites across the country in early to mid-2019. Mike Kirkland at Southwest Florida Cooling, retrofit 3 Carrier RTU's with inverter compressor technology assisted by ThermX. Six months in, the facility is saving an average of 52% on its cooling costs. Following the next set of successful evaluations, the company has proposed a potential rollout of 100 further locations.... Just to start. Buckle Up!

2019 Energy Expo was a Big Success!

The US Team, along with our Caribbean partner Greg Uptagraff from Power Plus Bahamas as well as our SolX Latin American Technical Director Gino Buonanno took to Miami in January for the Energy Expo 2019, a conference geared towards Latin America as well as the Caribbean. Although it was one of our smaller conferences, it has already produced big results. A new ThermX dealer in Nicaragua has already made a first purchase, as well as a number of other contractors are expected to follow suit in the coming week or two. Great job team!

Athens Congress 1/29/19

Our Global Commercial Director, David Parson was invited by our Greek partners, Mr. John Zolotas & Hellagro SA, to give the keynote speech at the Athens Congress, at the end of last month. Three ministries (Development, Energy and Economics) were invited to participate and will be announced the new EU funding schemes for energy saving, for the industrial sector. The Industrial Chamber of Commerce, the Centre for Renewable Energy Sources, the Public Power Corporation and many more similar associations supported this event.

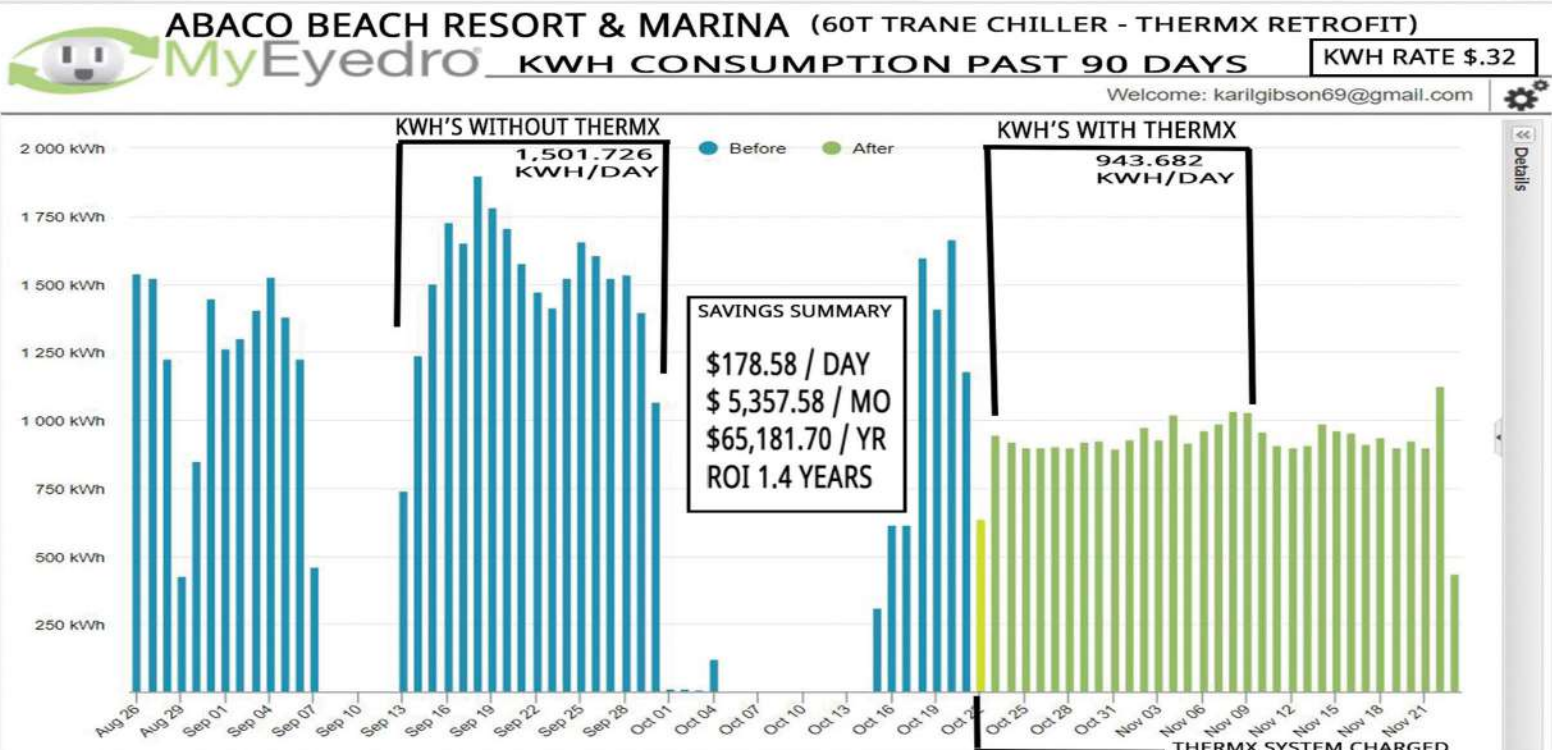

Shamrock Pies – South Africa

Anthony & his team in South Africa have now received the approval to install a 44 panel ThermX system for Shamrock Pies in East London. The project is estimated to be completed by the end of next month. We look forward to yet another credible food and beverage installation.

Hard to beat these results – 60 Ton Trane Retrofit

Greg Uptagraft with Power Plus Bahamas retrofit a 60 ton Trane chiller with 12 ThermX Panels at the Abaco Beach Resort. At \$.32 per kWh, this installation will be fully paid for with the savings achieved, in 1.4 years. In addition to above stated savings, the second on-site 60 ton chiller that previously came online regularly to assist, is now significantly less utilized. This customer will reap years of a 37% reduction in energy in an area where electricity costs are aggressively rising. What a great example of the energy reducing capabilities of ThermX solar thermal HVAC technology.

Riveira & Asociados
Innovating Solution

SolX Welcomes Our Dominican Partner

Solx Energy is proud to announce our newest installation partner and distributor for the Dominican Republic, Riveira & Associates. Jesus Riveira and his team have just completed their first installation; phase 1 of 3 at EZ Foods, a large food distribution facility. This installation consisted of 24 ThermX panels on a large refrigeration system. Phase two should be completed within a couple months. Welcome to the family!
